SKILLS

- java
- php
- c
- python
- c++
- css
- http
- Algorithm
- flutter
- javascript
- javaEE
- Critical thinking
- Nodejs
- assimply
- react
- Working under pressure
- Team Leadership

LANGUAGES

Arabic(Native)
Native or Bilingual Proficiency

English(Good)
Full Professional Proficiency

EDUCATION

BSc. Computer Engineering An-Najah National University

09/2018 - 06/2023

Palestine/Nablus

Secondary High School(Tawjihi) Secondary High School(Tawjihi)

09/2017 - 08/2018

Anabta

WORK EXPERIENCE

HCL e-commerce Trainee Oriented

01/2023 - 04/2023

(javaEE , frontEnd , Backend ,Hibernate , Introduction about react , JPA,JSTL)

Nablus & online with Spanish team

PERSONAL PROJECTS

Gates(AI project):

- My Demo: <https://drive.google.com/file/d/1dpv4lj4pzupQdnuYulffMkLX9EUyxwbU/view?usp=sharing>
- Use sign. sigmoid, linear, Tanh, Relu.

Smart Pharmacy(Web App):

- My Demo: <https://drive.google.com/file/d/1iuwYF1wVYSDzmwgd0XDAMW6jfd3bFUxN/view?usp=sharing>
- web application with PHP and Java Script languages and the application is an electronic pharmacy .

Peer to peer conversation app:

- My Demo: https://drive.google.com/file/d/1bw_0DG4SymLPBbc19kjuVaBJsyjJV-Y/view?usp=sharing
- It's java application with friendly graphical user interface , which connect the server and client to make conversation with any person from the online list (send and receive messages between them) .

Video Games Store (Advance Web project):

- An application that contains a 16600 games in which the subscriber can after logging in to buy any game , also contains a special integrated field for the admin in which the data is displayed according to the type of game each type has a field and displays the data of the type of play and can change it or remove games or add and remove employees and offer visualization.
- "Note: I worked on the project admin interface (front-end and back-end) at university with Jawna and used her GitHub account to push the code. You can view our work at: <https://github.com/yanabesher/AdvanceProjectt>

Inventory System:

- My Demo: <https://drive.google.com/file/d/1m86nmJHzBxM0Cc61zZ7YsA04glza09f3/view?usp=sharing>

FlyCar App (Graduation Software project)

- It's a mobile application that contains two services to alleviate the mobility and transportation crisis, including the idea of displaying the car showrooms available in each governorate and making scheduling for rental dates, so the person can rent a car at the time he wants, and there is also a taxi request service near my location. There is also an interface for the admin to add taxis and exhibitions that are allowed to participate in the application, and each exhibition has a special interface to display its cars.
- My demo: <https://drive.google.com/file/d/1tqtC9c6Zml-GeXxX32SRjmO1-szZAAoL/view?usp=sharing>
- Languages : flutter, node js , php, html.

ExpressCart app(Graduation hardware project)

- The Smart Shopping Cart is a project to simplify shopping experiences. The goal is to save time and effort in supermarkets by eliminating the need for traditional cashiers. The concept involves using a cart equipped with a camera that captures product details, displays them on the cart screen, and adds them to the shopping list. This project uses Arduino Mega and ESP32 to connect to Wi-Fi. In addition, the trolley uses sensors to independently track the user and avoid obstacles. The payment process has also been simplified; When entering the store, the user reserves the shopping cart using his credit card. Checked products are instantly added to their accounts, allowing them to check out only after they are sure there are enough funds to pay.
- My Demo: <https://drive.google.com/file/d/1DuW-M8Ky7j-h2J9pMzjOV62ioP7DStNk/view?usp=sharing>
